Faculty : FSTK

Cluster/Area of study : Design

Status of the product : Prototype

Product description :

KiBo Rack – designed as a multifunctional modular rack which possesses fresh design approach, dynamics and aesthetic visual design to attract universal users. The design can keep a lot of usual things like books, magazines and also suitable for keeping a personal items. The design concept is inspired from the unique of the songket Terengganu pattern geometric shape.

This modular rack were used a modular system which is can be assemble and disassemble for all component as ease access for packaging and transportation. The modular system of this design make it fit in every environment of houses; space saving and also available in units by units. This design can be arrangeable to become a new form and design according to the taste of the users.
