Cluster/Area of study : IT

Status of the product : Prototype

Product description :

Psychology social system was developed to help Pengasih to manage the data drug addicts and monitor treatment progress effectively . This system have three modules. There are record module, biopsychosocial assessment module, monitoring module, and report module. All the data about drug addicts such as family background, sex life, health and career is record in record module. Biopsychosocial assessment module keeps all treatment progress frequently. Treatment process at Pengasih take about 12 months. Monitoring the performance of drug addict's is executed in monitoring module. Report module provides various of report such as number of drug addicts based on race and number of drug addict based on age range. XML and AJAX technique was applied in this development. This technique is very powerful for searching, storing and retrieving process. This system was used by Pengasih and the results indicate psychology social system able to help their organization manage the data of drug addicts effectively.
